History and DNA

Glass Design embodies Italian excellence in the production and design of washbasins, cloakroom pieces and interior design accessories.

Located in Vinci, in the heart of Tuscany and native town of “Leonardo da Vinci”, Glass Design was founded in 1984 by the Borsellini family, further to a long tradition in the manufacture of artistic glass.

Both by using technologically advanced materials such as stainless steel or siliconium, and by working in an artistic way with traditional materials like formed 24%pb crystal and glass, the Glass Design company contributes to the creation of a new style, where even the accessory is addressed in all detail, becoming the main subject of the environment, a true “fashion” product, highly appreciated in the world and exported to more than 60 countries.

Over 200 Tuscan artisans and more than 15 Murano glass-makers work within the company's production chain, enabling the customisation of each product to suit individual needs and specific requirements, in order to create a portfolio of unique and exclusive products.

Quality

As a premium brand Glass Design is a symbol of design and high quality 'made in Italy' craftsmanship. Our products are to enrich your life and living spaces. We create projects that shape the future but that remain timeless design to make a true difference for you for years to come.

The synergy between design and craftsmanship is synonymous with the Glass Design brand. Exclusive collections comprising unique items, all made with the utmost care, embody and carry forward a wealth of artisanal traditions. Shapes and colours come to life, signalling an endless passion for excellence.

Materials

Traditional and Innovative

 **Cristallo**
DE' MEDICI
Pb 24%

Exclusive collections created from pure crystal with 24% lead content. These exquisitely refined products are mouth-blown and bevelled in stone by our master artists in accordance with the most ancient and noble of glass arts. Neither machines nor technology are employed in the process, resulting in classical, contemporary or futuristic works of art.

made with
MURANO[®]
glass

Murano glass is the epitome of elegance and timelessness. By combining innovative techniques with traditional artisan workmanship, unique, prestigious and inimitable objects are created.

Marmo CARRARA

The marble extracted from the famous quarries of Carrara is the most valuable and sought after in the world. Michelangelo chose it to create David, the masterpiece of Renaissance sculpture, thanks to its particular beauty and its distinctive veins. Unique among marbles, Calacatta and Marquinia, give free rein to design in the pursuit of its ideal form, in order to combine aesthetic luxury with long-lasting performances and the latest technological trends.

VetroFreddo®

VetroFreddo® is an innovative material composed of glass pigments and resin. Its major characteristics are its versatility in adapting itself to any imaginable form or shape. The material's unique characteristics are expressed through the soul of its colour, which can be in transparent, semi-transparent or opaque form, due to the material composition of glass pigments.

No limits exist in regards to colour. Apart from the existing palette, any colour from the "RAL" scheme can be chosen.

VetroFreddo® is temperature resistant up to approximately 100°C and can be worked and carved just like marble or glass. All objects designed with the material VetroFreddo can be cleaned with any type of non-granular natural cleaner, using soft sponges or cloths. In case of superficial damage (scratches), the damaged area should gently be rubbed with a sheet soaked in olive oil. In case of deeper scratches or damage, a special replacement glass paper is available from the manufacturer for every colour and object.

Pert[®]

polimero tecnologico

Pert[®] is a technological polymer of extraordinary quality, combining a low specific weight with high mechanical resistance. It is particularly suited to fields where light weight is essential (e.g. in nautical, aeronautical, camping, ...). It is a material which enables the creation of products of high design, finely made, allowing perfectly crafted angles and a smooth plain surface, with the possibility to choose among a wide range of colours to suit individual tastes and requirements.

Alumix[®]

lega d'alluminio

A high-tech product, both elegant and contemporary, born from a merger of aluminium alloys. The decorations are brush painted, employing a special brush technique in order to obtain a bi-chromatic effect. The surface is brushed and polished by hand to enhance the soul and colour, which are typical of this material.

Florence Glass ATELIER®

The **Florence Glass Atelier®** project is inspired by embedding the philosophy of the fashion world into product research. The focus is on enhancing the crystal material with colours and textures that reflect fashion trends.

Earth is the source of inspiration for colours and tactile sensations with bi-colour finishes and textural exteriors. The **Terra di Siena**[®] collection of ceramic washbasins is made entirely by hand. Slight colour differences and shape imperfections are testimony to the craftsmanship of the production process.

INOX[®] ZERO

The products of the **INOX ZERO[®]** Collection are made out of stainless steel (18/8), utilising advanced production processes enabling the combination of expressive design with low weight. A wide range of colours can be achieved, from timeless metallic shades to prestigious brushed and avant-garde colours.

Siliconio[®]

Siliconio[®], is the latest development in the family of silicone materials. Featuring unique designs based on its elasticity, it allows for rigorous shapes, benefiting from the great potential of the material, being amongst the most unique and original available. It is a material of touch: soft, elastic, sensual – simply unique. **Siliconio**[®] can be bent and folded in any possible way, always returning to its original form once released. **Siliconio**[®], is water repellent and soft, thus reducing the risk of injury. It is also resistant to extreme temperatures from -60°C to +250°C, washable, self-extinguishing, non-toxic and endowed with excellent chemical resistance characteristics. **Siliconio**[®] is 'Touch Design' at its very best.

Bi-mat

Bi-Mat® is born of the merger of fiberglass (80%) and Cool Glass Light, creating an innovative material that is both lightweight and durable. Its particular composition makes the product extreme versatile, allowing for objects of large volume, for example a bathtub, to be lightweight for easy use and placement.

The outer surface is white gloss and brushed by hand and is particularly suitable for processing in a wide variety of colours thereby enabling the creation of unique products.

The Glass Design Team collaborate with world famed designers and architects who for many years have carried out product developments and corporate projects under the guidance of our Creative and Managing Director Gian Luca Borsellini.

In addition these collaborations the company also boasts an extensive range of designs exclusively created under the Glass Design label.

In fact, the Glass Design team has been responsible for the realisation of some of our most innovative and recognisable products, for example our selection of sustainable and eco-friendly Siliconium washbasins.
